

L2

Building Blocks

Tags, elements, attributes, links, images, lists

CHEAT SHEET

"Every structure is made of components. Learn each block. Then stack them into something real."

<h1> to <h6>

Headings. h1 = most important (one per page). h2-h6 for sub-levels. Always use in order.

<p>

Paragraph. Wraps every block of body text. Never leave text without a tag.

Image. Self-closing. Needs src= to find the file and alt= to describe it.

<a>

Anchor (link). href= sets destination. Wrap text or images to make them clickable.

 /

Lists. ul = bullets. ol = numbers. Each item uses . Powers navs, features, steps.

Attribute

Extra info inside a tag. Written as name="value". Example: src="photo.jpg"

src=

Source. Points to the image file location. Required on all tags.

href=

HyperReference. Sets the link destination. Required on all <a> tags.

alt=

Alternative text. Describes images for screen readers. Always required.

Self-closing

A tag with no closing partner because it holds no content. and
.

SYNTAX AT A GLANCE

HTML

```
<h1>Page Title</h1>           -- Most important heading
<h2>Section Title</h2>       -- Sub-heading
<p>Body text goes here.</p>   -- Paragraph
 -- Image (self-closing)
<a href="about.html">About Me</a>      -- Link
<ul>  <li>Item one</li> <li>Item two</li> </ul> -- Bulleted list
```
