Build Your Page

Nova's complete HTML reference -- all 4 lessons

CHEAT SHEET

"You have the blueprint. You have the blocks. You know the structure. Now -- build."

Nova

<!DOCTYPE html>

Declares the document type. Always the very first line.

<head>

Invisible setup. Holds <title>, <link>, <meta>.

<body>

Everything visitors see. All visible content lives here.

<p>

Paragraph. Wraps all blocks of body text.

<a>

Link (anchor). href= sets the destination.

List item. Always inside or .

<header>

Semantic top section. Logo, nav, title area.

<main>

Primary content. One per page only.

<footer>

Bottom section. Copyright, links, credits.

<html>

Root element. Everything else lives inside it.

<title>

Sets the browser tab title. Lives inside <head>.

<h1>-<h6>

Headings. h1 most important. One h1 per page.

Image. Self-closing. Needs src= and alt= always.

 /

Lists. ul = bullets, ol = numbers. Items use .

<div>

Generic container. Groups elements for CSS styling.

<nav>

Navigation section. Holds site links.

<section>

Thematic group. About, Work, Contact areas.

class= / id=

CSS targeting. class is reusable, id is unique.

YOUR PERSONAL SITE HTML CHECKLIST

☐ <!DOCTYPE html> is the very first line
